

CLAIM

00011. (Independent Claim No. 1) I claim the use of Dermawear as a wearable garment that will consist of any type of fabric but particularly a 100 percent cotton vesture as a protective apparel during sexual intercourse against epidermic parasites and/or sexually transmitted diseases of the genital skin not protected by a condom.

00012. (Independent Claim No. 2) I claim in utility a specialized elastic hole which is cut out in the front of the Dermawear garment as an outlet for the male penile shaft and/or an opening for the female vaginal canal. The scientific name for the elastic hole in the medical garment of Dermawear is the "Receptacle Rim." The elastic band of the receptacle rim fits comfortably around the circumference of the base of the penis and is used in conjunction with a condom as a 100 percent protection barrier against sexually transmitted diseases.

00013. (Independent Claim No. 3) I claim ownership of the intent and application of use of the Dermawear manufactured medical product for retail sale to persons buying additional protection for the genital region, which has not been afforded by condom use alone. I reaffirm and assert title to the fabric shield of Claim 1, and the "Receptacle Rim" of Claim 2, for which the whole Dermawear garment in utility will cover the skin of the genital region during sexual intercourse

in order to defend against the following skin parasites: Phthirus Pubis (crabs), Human Papilloma Virus (warts), Haemophilus Ducreyi (chancroid), Sarcoptes Scabiei (scabies), Plaques (Tinea, Syphilis), Herpes (Biofluid Hazard), Lesions (Biofluid Hazard), and any and all biofluids containing residue protein of R.N.A. – D.N.A. material that is capable of sticking to skin during naked sexual genital to genital contact. Dermawear will have a double-butted (2 in 1) fabric shield with a fluid resistant material sown in between the garment for a redundant protection against skin pathogens of the genital region. Dermawear will also contain a loop defense shield which is a microscopic pubic hair simulation consisting of 100 percent cotton strands.

00014. (Dependent upon Claim No. 1) Dermawear on its face is currently nonobvious but with the education of the consumer, Dermawear will eventually become distinct as a medical garment device that is used in conjunction with a condom to prevent and/or protect its user from sexually transmitted diseases of the genital skin left uncovered by a rubber prophylactic.

00015. (Dependent upon Claim No. 2) The functional parts of Dermawear are (1) the fabric shield, (2) the Receptacle Rim with its elastic band, (3) and the loop defense strands.

00016. (Dependent upon Claim No. 3) The technical merit of Dermawear is its protection against: (1) Phthirus Pubis, (2) Human Papilloma Virus, (3) Haemophilus Ducrelyi, (4) Sarcoptes Scabiei, (5) Plaques of tinea and syphilis, (6) Herpes biofluid of blister discharge, (7) lesions of any disease with biofluid discharge, (8) Eggs of Phthirus Variant (E.O.P.V.: a human Phthirus Pubis and Sarcoptes Scabiei inner body infestation – eating red blood cells – triggering one of several Leukemia causes, and one of the various malignant neoplasms as blood cancer. A white blood cell proliferation occurs and red blood cells revert to an immature and less differentiated form. With increased nutrition Phthirus and Sarcoptes mutate from their original biology of shape and behavior. From their feeding secondary infections result out of their excrement. Clinical manifestation—recurring nits upon the pubic hair shaft long after external curative treatment.) (9) General pruritus of the pubic area from any pathogenic cause, (10) any skin to skin contact of the genital region where a condom alone is not 100 percent effective in preventing sexually transmitted diseases.
